Toelichting onderzoek

Achtergrond van het onderzoek

The prevention of stunting and micronutrient deficiencies, control of overweight/ obesity and diet-related non-communicable diseases are in the heart of the Sustainable Development Goals and in all nutrition strategies in Southeast Asia. Unfortunately, progress has not always been significant and there is an urgency to understand and plan programs for improvement and impact at national and global level. However, the lack of comprehensive data in children is a barrier that prevents solutions and strategies to effectively address the dual burden of malnutrition and hidden hunger.

The South East Asian Nutrition Surveys II (SEANUTS II) builds on the work, experience, and findings gained from SEANUTS I in 2010-2011. Relatively high prevalence of stunting, overweight/ obesity iron deficiency anaemia and vitamin D insufficiency were found in the participating countries, sometimes with large differences across population groups. SEANUTS II is a multi-country collaboration with research institutes from four South East Asian countries - Malaysia, Indonesia, Thailand, and Vietnam.

Doel van het onderzoek

SEANUTS II will provide up-to-date and in-depth insights and confirmations into the nutritional status and lifestyle behaviors of almost 19,000 children between 6 months and 12 years old in a nationally representative population in Malaysia, Indonesia, Thailand and Vietnam

Deelname eisen

Belangrijkste voorwaarden om deel te mogen nemen (Inclusiecriteria)

Indonesian/ Malaysian/ Thai/ Vietnamese nationality respectively

Age between 6 months to 12.9 years old; primary school children staying at the study location

If data is collected over a period of a few days, subjects to be available throughout this period

Signed informed consent/ assent

Willingness to give blood sample if applicable

Belangrijkste redenen om niet deel te kunnen nemen (Exclusiecriteria)

Sibling of a participant of SEANUTS II project

Feeling unwell, ill or sick on the day of measurement

Physical disability as assessed through physical examination by general practitioner, which limits performance of tests

Recent medical history (past 3 months) of serious infection, injuries and/ or surgeries which required hospitalization

Genetic, cardiovascular or respiratory illness where the child has been advised to decrease physical activity

Family members of an employee of the Sponsor or the study site

Onderzoeksopzet

Opzet

Type:	Observationeel onderzoek, zonder invasieve metingen
Onderzoeksmodel:	Anders

Toewijzing:	N.v.t. / één studie arm
Blinding:	Open / niet geblindeerd
Controle:	N.v.t. / onbekend

Deelname

Nederland	
Status:	Werving nog niet gestart
(Verwachte) startdatum:	15-07-2019
Aantal proefpersonen:	18904
Type:	Verwachte startdatum

Voornemen beschikbaar stellen Individuele Patiënten Data (IPD)

Wordt de data na het onderzoek gedeeld: Nee

Ethische beoordeling

Positief advies	
Datum:	20-08-2019
Soort:	Eerste indiening
