### Uitkomstmaten

#### Primaire uitkomstmaten

Primary outcomes are incidence and severity of fall-related injuries. These outcomes will be monitored during the school year by the (gymnastic) teachers. Every week, the children will be asked about their injuries. When a child has suffered a severe injury (according to the definition of van Mechelen et al.), he or she fills in a form that questions the injury. The severity of the injury will be based on the time-loss of participation in physical activity. Because children will only fall if they take part in physical activity, the exposure will be questioned three times during the schoolyear.

# Toelichting onderzoek

## Achtergrond van het onderzoek

In the Netherlands, an increase has been found in the number of sports related injuries in children. This increase mainly concerned wrist fractures due to fall-injuries in children aged 8-12 years. Because the increase in injuries does not show a relationship with sports participation, it is theorized that the injuries can be influenced by improving falling skills in school children. To improve these falling skills, Consument en Veiligheid has developed a training program in which children will learn how to fall more safely.

The main purpose of this study is to evaluate the effect of the training program on incidence and severity of fall-related injuries in primary school children. Furthermore the possibilities of implementing the training program in the gymnastic course will be evaluated, and fall-skills and fall-coordination will be measured.

## Doel van het onderzoek

Reduction of number of fall related injuries in school children.

## Onderzoeksopzet

0M = oct 2009;

1M = jan 2010;

2M = may/june 2010.

## Onderzoeksproduct en/of interventie

The intervention group will receive an eight week during fall-related injury prevention training program (titled: 'Vallen is ook een sport' © 2009 Consument en Veiligheid). The main purpose of this training is to teach children how to fall safely. This training course can be integrated in primary school gymnastic lessons and will be given by the children's regular gymnastic teacher.

The (gymnastic) teachers of the control group will execute their normal routine.

## **Deelname eisen**

### **Belangrijkste voorwaarden om deel te mogen nemen (Inclusiecriteria)**

1. School children (group 5,6,7,8 of Dutch primary schools);
2. Knowledge of the Dutch language;
3. Skilled in reading and writing.

### **Belangrijkste redenen om niet deel te kunnen nemen (Exclusiecriteria)**

Participants have to be mentally and physically capable of completing the training program.

## **Onderzoeksoopzet**

## Opzet

Type:	Interventie onderzoek
Onderzoeksmodel:	Parallel
Toewijzing:	Niet-gerandomiseerd
Blinding:	Open / niet geblindeerd
Controle:	Geneesmiddel
